

First, press **win + I** to launch the charm bar, and click **Settings** at the bottom.

And then click **Change PC Settings** at the bottom.

Once you are in the **Change PC Settings** menu click on **Update and Recovery**.

Then click on **Recovery**.

Windows Update

You're ready to automatically install updates.

No updates are available. We'll continue to check daily for newer updates.

[Check now](#)

[View your update history](#)

[Choose how updates get installed](#)

And click **Advanced Options** at next screen.

Once the Recovery menu has loaded click **Restart Now** button under **Advanced start-up** section. Remember to save all your work first before clicking it.

Refresh your PC without affecting your files

If your PC isn't running well, you can refresh it without losing your photos, music, videos and other personal files.

[Get started](#)

Remove everything and reinstall Windows

If you want to recycle your PC or restart completely, you can reset it to its factory settings.

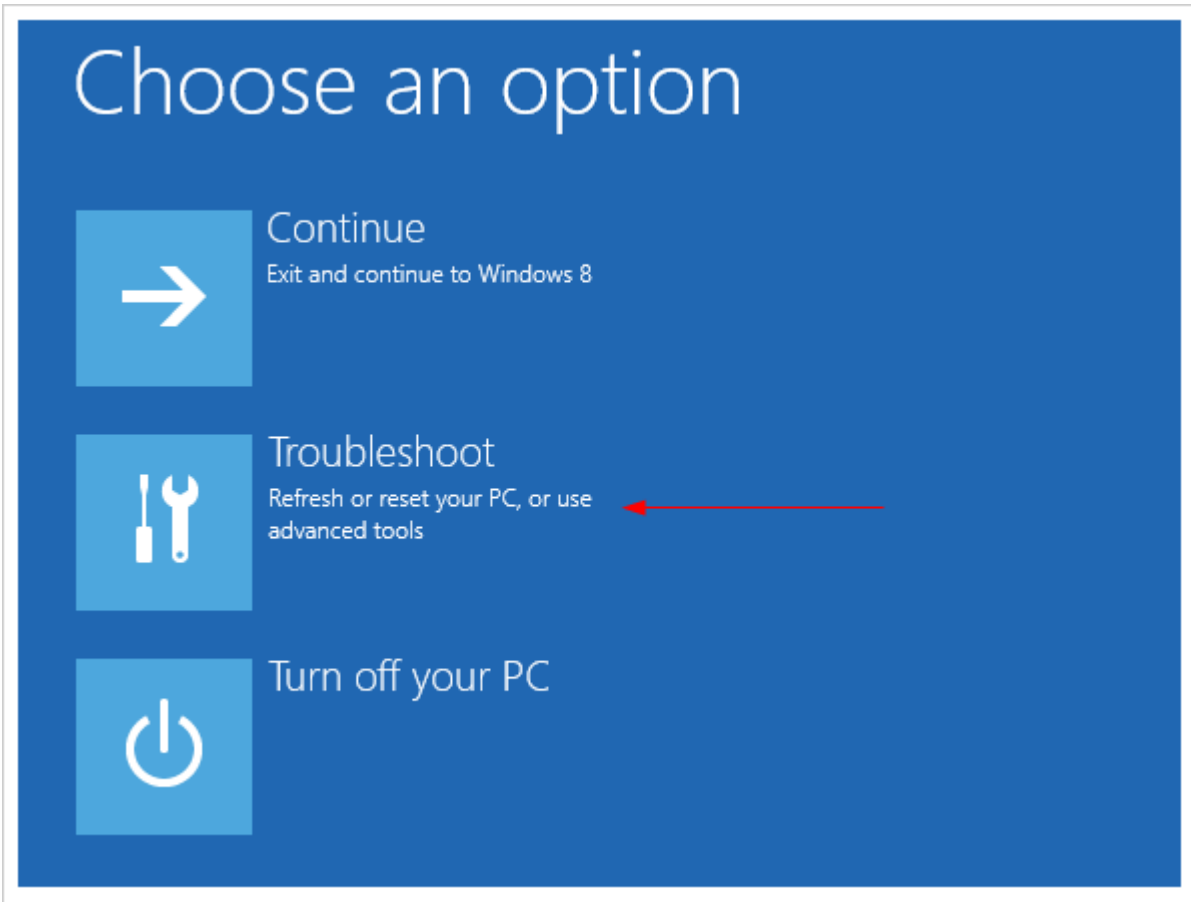

[Get started](#)

Advanced start-up

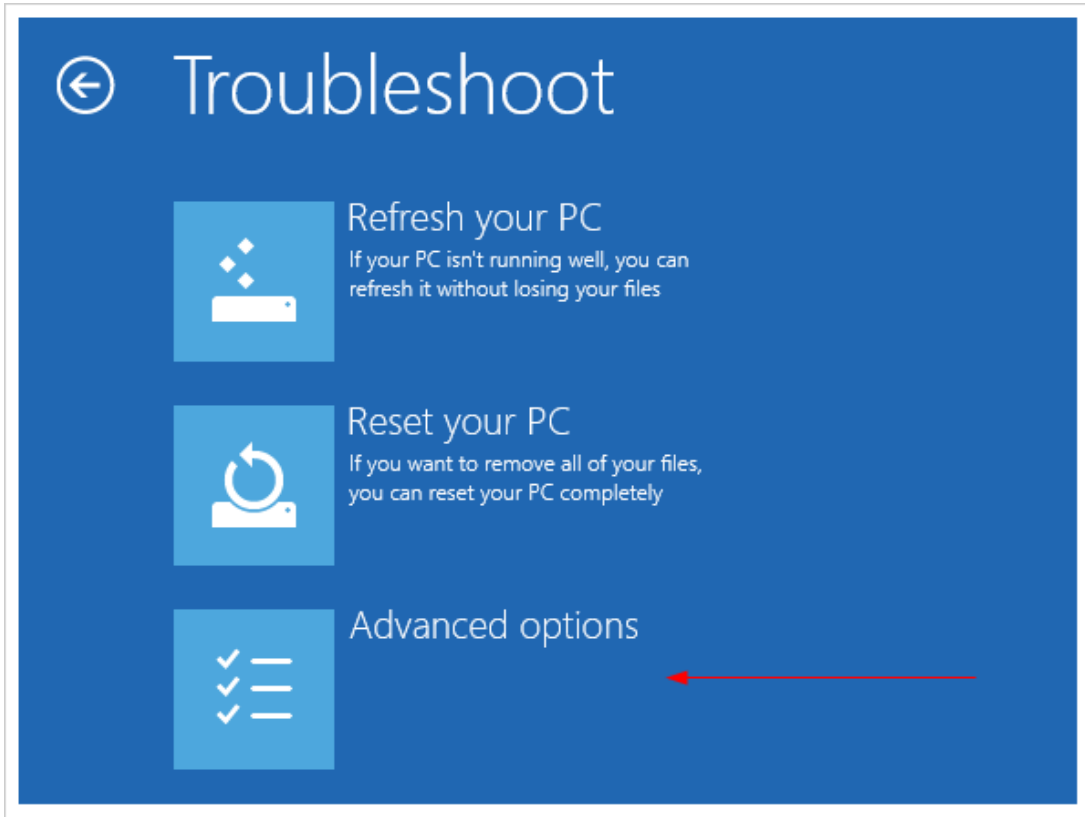

Start up from a device or disc (such as a USB drive or DVD), change your PC's firmware settings, change Windows start-up settings or restore Windows from a system image. This will restart your PC.

[Restart now](#)

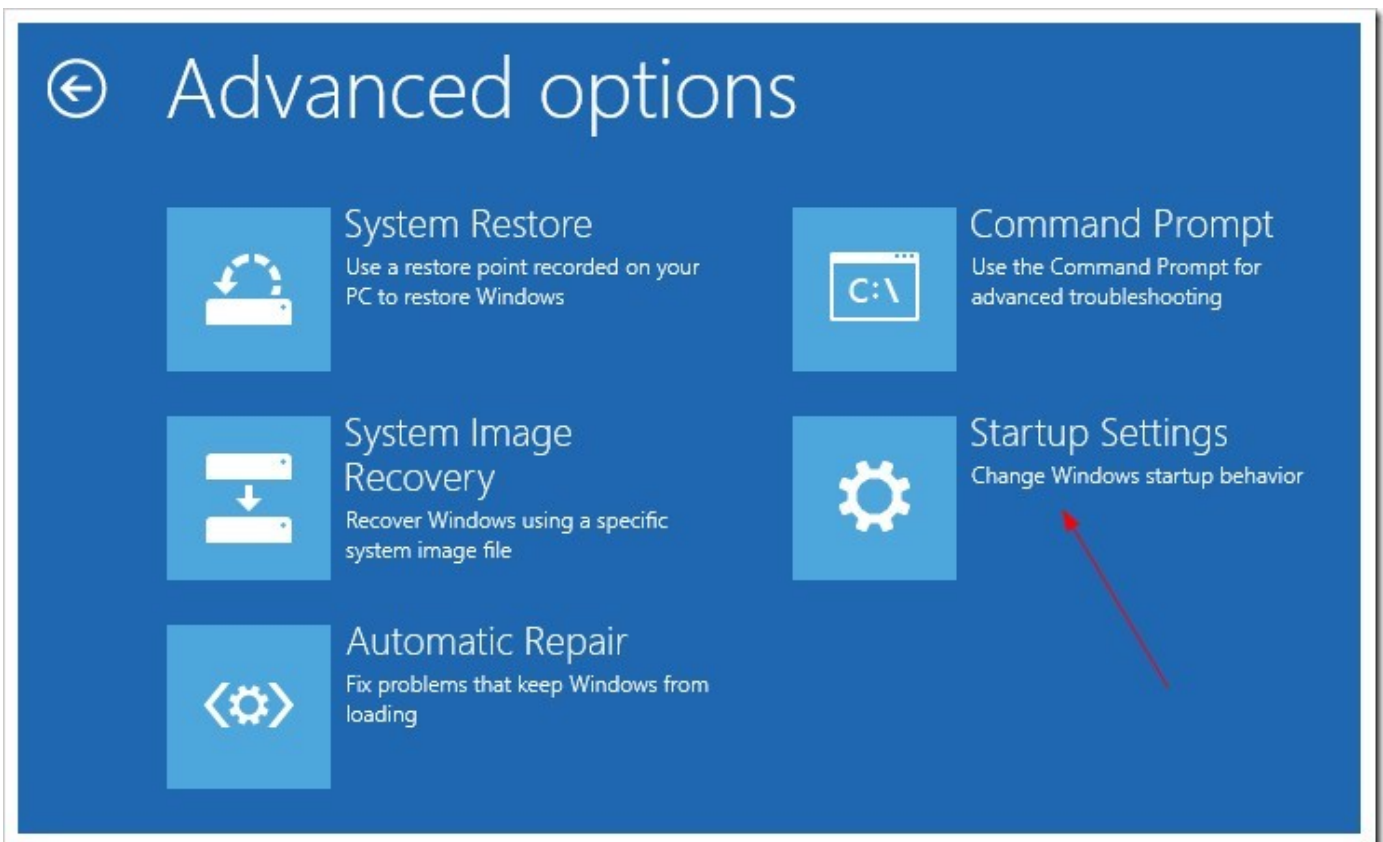

The computer reboots to a startup menu, in which click **Troubleshoot**.

And click **Advanced Options** at next screen.

Choose **Startup Settings** next,

And click **Restart** button.

← Startup Settings

Restart to change Windows options such as:

- Enable low-resolution video mode
- Enable debugging mode
- Enable boot logging
- Enable Safe Mode
- Disable driver signature enforcement
- Disable early-launch anti-malware protection
- Disable automatic restart on system failure

Restart

The computer reboots and prompts another menu to choose. One of the items is to **Disable driversignature enforcement**. Press **F7** to continue booting to Windows 8.1 with digital sign enforcement disabled.

Startup Settings

Press a number to choose from the options below:

Use number keys or functions keys F1-F9.

- 1) Enable debugging
- 2) Enable boot logging
- 3) Enable low-resolution video
- 4) Enable Safe Mode
- 5) Enable Safe Mode with Networking
- 6) Enable Safe Mode with Command Prompt
- 7) Disable driver signature enforcement
- 8) Disable early launch anti-malware protection
- 9) Disable automatic restart after failure

Press F10 for more options

Press Enter to return to your operating system

And then I was able to get the Windows Security warning window offering me to install this driver anyway.

It was successful! Restart computer once again to re-enable the digital sign enforcement.

I would suggest changing the UAC settings first to see if the Install Anyway window prompts out. The solution showing off in this post should be the last resort to try out. And make sure the driver you are about to install is safe, though not digitally signed.
